Step 1 – Install Shelves

- Determine shelf installation locations. Typically, the bottom shelf goes on the bottom lance in the side panel.
- The bottom location is typically used when installing the shelf on top of a wall slide.
- Shelves can be assembled with flanges pointing up to retain shelf contents, or flanges pointing down to allow the installation of drawer cabinets. Decide which option is best for each shelf before attaching to the side panels.
- The rear flange of the shelf has the slot, while the front of the shelf has the nut pressed into the front flange.

Picture below shows the shelf facing upwards.

- Make sure the shelf is oriented properly (nuts in front) before attaching. Press the shelf down firmly so it is resting solidly and level on the lances in the shelf sides.
- Most common mounting locations are shown below.

Picture below shows the shelves in a downward position.

Step 2 – Install Front Hardware

- Attach the front side of both shelves using 1/4" x 1/2" pan head screws.
- Repeat on both sides.

Step 3 – Install Support Gussets

- If installing the bottom shelf on the bottom lance, use the support gussets. If no gusset is being installed, skip to the next step.
- At the rear of the shelf, slide the gusset **between** the side panel and the previously installed shelf so that the flange on the gusset is towards the inside of the shelf.
- Bolt the gusset, the shelf and the side panel together using 1/4" x 1/2" pan head screws and 1/4" flanged nyloc nuts.
- Repeat on both sides.

Step 4 – Install Remaining Hardware

- Attach the rear of the shelves to the side panels using 1/4" x 1/2" pan head screws and 1/4" flanged nyloc nuts.
- See previous step if a gusset is being installed.
- Repeat on both sides.

Follow instructions from the mount kit to complete installation.

Assembly is now complete.
